# FM60-VSAT Quick Start Guide

This guide provides basic operation information for the FM60-VSAT system. If you need any assistance, please contact your distributor for technical support.

Getting Help

For complete operation, setup, and diagnostics information, refer to the system's comprehensive Help, available on the Support tab of the FM60-VSAT's web interface.
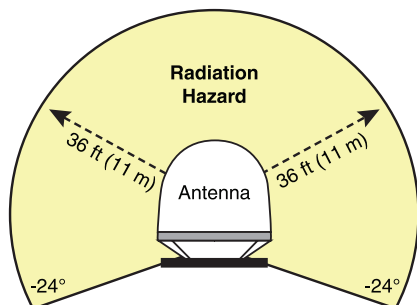

Turning On the System

Power Button

ICM

FM60-VSAT

Press the power button on the ICM then wait 5 minutes for system startup. When the ICM indicates "Online," you can access the Internet using any device connected to the network.

*The antenna requires a clear view of the sky. Objects such as bridges and boat masts can block satellite signals.*

Caution – RF Radiation Hazard

Radiation Hazard

36 ft (11 m)   36 ft (11 m)

Antenna

-24°   -24°

The antenna transmits radio frequency (RF) energy that is potentially harmful. Whenever the system is in use, make sure everyone stays more than 36 feet (11 m) away from the antenna. No hazard exists directly below the antenna.

You can program up to two no-transmit zones to prevent transmissions and protect people in accessible areas around the antenna. Refer to the Help for details.

Accessing the Web Interface

Home	Settings	Support	Updates		Login You are not logged in

My VSAT Status

Connection Status	Antenna State	Satellite	Beam
✓ ONLINE SNR: 11.00dB	TRACKING	91.1W	Ku-BAND: 30

Antenna GPS
41.5216 N
71.2915 W

Connect your device to the ICM's User Ethernet 1 port. Then start your web browser and enter the ICM's IP address (default is 192.168.5.1).

At the web interface, you can check system status, update software, and configure the system.

For more details about updating the system software, refer to the system's Help.
